Plot Saving

Behzad

July 29, 2019

This tutorial shows the way to output a plot properly by the following attributes:

fig.width = 6

fig.align='center'

out.width="70%"

fig.show='hold': When mingling code and text, like I do in this book, I recommend setting fig.show = "hold" so that plots are shown after the code.

```r
library(dplyr)
library(ggplot2)
mpg %>% ggplot(aes(displ, hwy)) +
  geom_point(aes(color = class)) +
  geom_smooth(se = FALSE)
```
